

Website Maintenance Services from CollaborintSM are the professional, cost-effective solution for maintaining your website, whether internet, intranet, extranet, or a combination. You pay for exactly the amount of service that's right for your needs while receiving comprehensive, reliable and focused expertise.

Professional Web Team

Our website maintenance and management team has decades of combined experience using Web technologies ranging from standard HTML and CGI to Flash, DHTML, XML, and application development frameworks/servers such as ASP, ASP.NET, Java/J2EE, ColdFusion and PHP. Collaborint specializes in support of database driven websites featuring Microsoft SQL Server and MySQL and running on IIS or Apache. We feature standards-based design for accessibility as well as accessibility updates for your existing site.

You can expect that we will be able to handle everything from simple content changes to complex programming tasks and consulting services. Since our specialty is the Web, we can provide dedicated, concentrated and optimized knowledge to meet all of your website management needs at a level that makes sense to you.

Interact Work Request SystemSM

Contracting for CollaborintSM maintenance services includes access to our Interact Work Request System. Work requests are submitted through an easy-to-use, customizable interface. All correspondence is tracked, allowing monitoring of both active and archived requests. Interact also features threaded discussions, file uploads, e-mail notifications, and more.
